Magnesium

Studies suggest that a lack of magnesium can decrease testosterone levels. Magnesium is vital for maintaining normal blood pressure and is crucial for controlling the intake of calcium, a key component in sperm development.

Low magnesium levels are also associated with ejaculatory issues such as premature or delayed ejaculation. The intake of magnesium provides two benefits: muscle relaxation and improved blood flow in the penile area. It also helps in preventing muscle cramps during orgasm.

The insufficient amount of magnesium is connected to the emergence of prostate hypertrophy. Magnesium is crucial for safeguarding bone health and averting bone resorption. Additionally, it has a central role in overseeing essential hormones like estrogen and progesterone.

More than 300 enzymatic reactions in the human body rely on it. It helps manage heart rhythm and minimizes the likelihood of arrhythmias. It serves as a safeguard against elevated cholesterol and hypertension levels.

Take advantage of a fantastic deal on Boostaro Capsules today!

Vitamin K2

Vitamin K2 is essential for proper blood clotting. A recent study suggests that vitamin K2 may help in treating male infertility.

The study proposes that vitamin K2 may be a viable treatment for male infertility. More investigation is needed to confirm the efficacy of vitamin K2 in men.

Proline

Dr. John R. Lee performed an investigation on the impact of proline on the quantitative analysis of sperm. Cell signaling is a crucial process wherein Proline, an indispensable amino acid, plays a significant role. The study involved a sample size of 30 male individuals, who were randomly assigned in equal proportions to one of three experimental groups: a control group that did not receive proline, a group that received 1 g of proline, and another group that received 2 g of proline.

Facilitates the production of Nitric Oxide

The performance-enhancing effects of this supplement are attributed to its ability to optimize nitric oxide levels, thereby promoting increased utilization of testosterone.

Vitamin C

Diabetic males experienced enhanced functionality with the use of additional vitamin C, as indicated by the research. It is believed that vitamin C can aid in the physiological process of penile tissue integrity, given that collagen plays a crucial role in this aspect.

Further research showed that boosting vitamin C levels in males dealing with infertility improved the quality of their condition.

The introduction of Vitamin C as a therapeutic intervention has demonstrated significant efficacy in improving health function among males.

Cost & Purchase

The Boostaro platform can be reached via its exclusive website. Due to current security issues, the manufacturers suggest that potential purchasers should only obtain the supplement from the authorized website.

Each **Boostaro unit costs** \$69, not including shipping. Customers can benefit from reduced prices for bulk orders, enabling them to purchase the supplement for as little as \$49. Free shipping is offered for bulk orders.

Subscribers who enroll in Boostaro gain privileged entry to a prestigious members-only site that features a wide array of recipes, menus, and useful how-to manuals. Furthermore, every **Boostaro purchase includes** two extra guides to assist users in optimizing their usage.

User Testimonial

After just a few weeks, I noticed real results. Highly recommended! - Mike D.

Lysine

Dr. Robert H. Greenblatt conducted a study on the impact of adding lysine to the diets of men with insufficient testosterone levels. Lysine is essential for protein synthesis. Studies have shown a relationship between low testosterone levels and depleted lysine levels. He noted that it effectively raised testosterone levels in the test subjects.

A group of forty men aged 18-65 was divided by the researchers into two groups. One group received 500 mg of lysine three times daily, while the other group received a placebo. Initially, both groups displayed similar traits. After 12 weeks, the lysine group experienced substantial increases in testosterone levels. These results suggest that lysine could be a viable treatment option for individuals with hypogonadism.

In light of their research, the authors have established that administering lysine supplements is not only safe and well-tolerated but also has the potential to successfully regulate serum testosterone levels in individuals with idiopathic hypogonadotropic hypogonadism.

CoQ10

Coenzyme Q10, a substance inherently found in cells, resembles vitamins and is significant for ATP synthesis, which is necessary for the body's energy production. It is imperative for sustaining heart muscle, blood vessel, brain tissue, and other bodily functions. A decrease in CoQ10 levels with age may contribute to the emergence of cardiovascular conditions.

Citrulline

Dr. David J. Riggs and Dr. Michael A. Zemel carried out a study on the impact of citrulline supplementation on the reproductive function of men. New research has shown that citrulline, a crucial amino acid, has healing qualities for managing health. In the study, 20 men with low energy levels were given 60 mg/kg of body weight of citrulline twice a day for four weeks, with remarkable outcomes.

According to the study, this particular element improves performance in males, which is important given that many men facing exhaustion tend to delay seeking medical attention until their condition worsens.
